

# QC HAND TEST SCREENS

QC Hand Test Screens are manufactured with the same precision and attention to detail as all of our custom punched screens. We start with premium quality 20ga. sheet metal and custom punch to your perforation requirements including fastener holes. Our custom-punched screens eliminate partial holes and are built to last. Each frame is constructed of hardwood and designed to be stackable. We also construct 12 and 24 screen holding racks for our 12"x12" hand test screens. 12"x18" hand test screens are also available.
