

Universal Compatibility

Works with most roasting machine, even with drum lights.

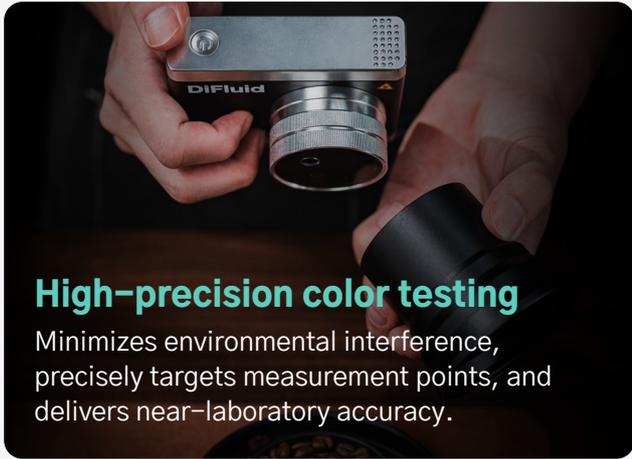

DiFluid

±0.5 Agtron

Supports color measurement with lab-grade precision of ±0.5 Agtron.

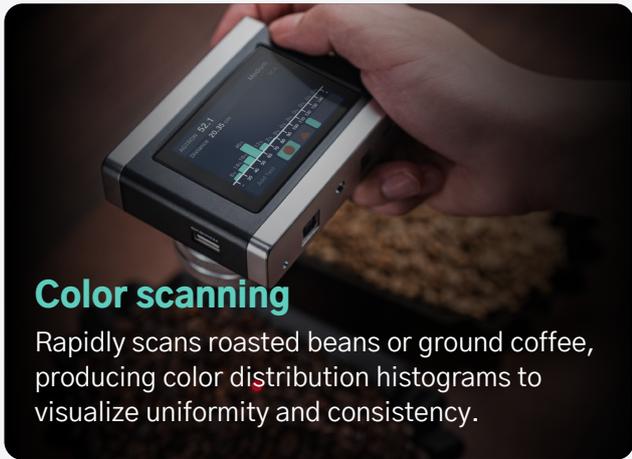

905nm Pulsed Laser

Precision measurement for accurate roasting insights.

High-precision color testing

Minimizes environmental interference, precisely targets measurement points, and delivers near-laboratory accuracy.

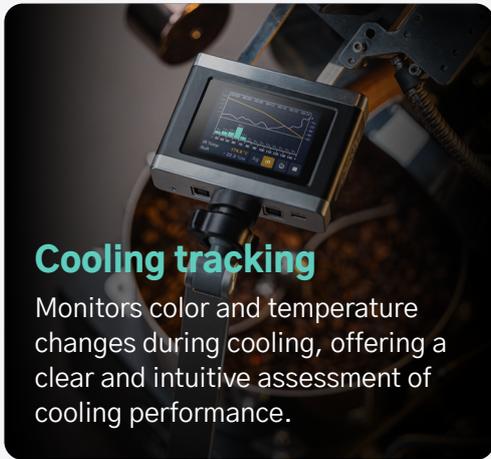

Color scanning

Rapidly scans roasted beans or ground coffee, producing color distribution histograms to visualize uniformity and consistency.

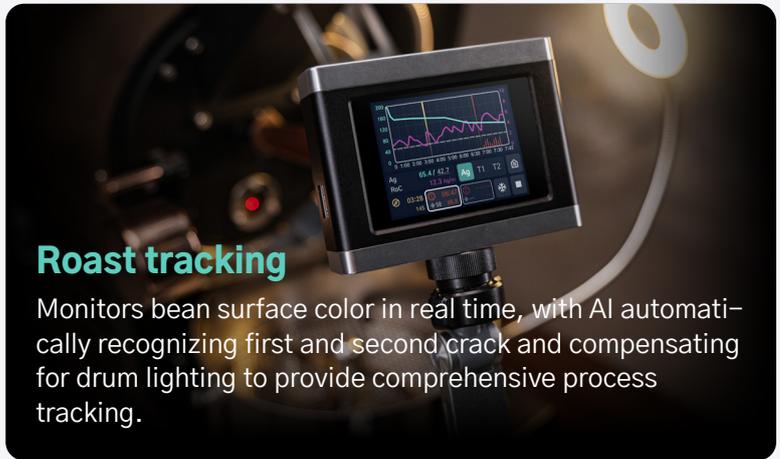

OmniFlux

Smart Roast Monitor Analyzer

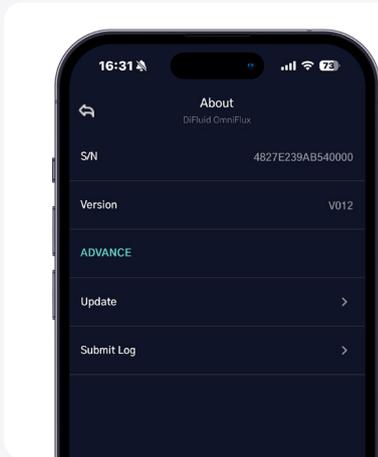

Cooling tracking

Monitors color and temperature changes during cooling, offering a clear and intuitive assessment of cooling performance.

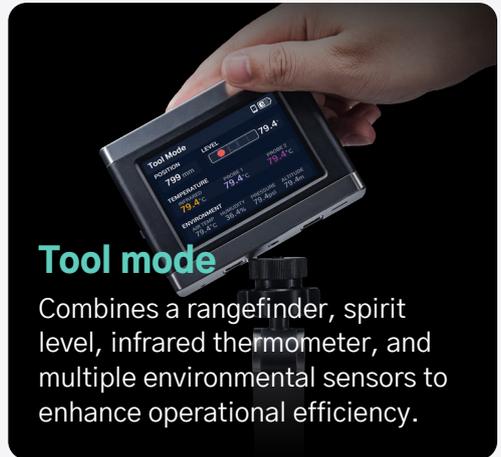

Roast tracking

Monitors bean surface color in real time, with AI automatically recognizing first and second crack and compensating for drum lighting to provide comprehensive process tracking.

Stay connected with CoffeeOS and enjoy seamless wireless updates as new features are released over time.

Tool mode

Combines a rangefinder, spirit level, infrared thermometer, and multiple environmental sensors to enhance operational efficiency.
