

IMP-24 A Little Printer for Big Jobs

Here is a top quality impact printer that replaces bulky, expensive printers where 80 column capacity is unnecessary. It is available in RS232C serial, Parallel, TTL serial, and 20mA current loop interfaces.

Many Uses

Only the imagination limits the number of profitable uses for this small and versatile printer. They include: inventory control in combination with bar code scanners, hard copy credit card verification, documentation of data received from automotive diagnostic equipment, remote message printing, peripheral equipment for scale applications, documentation of medical and dental procedures, logging data from testing procedures in laboratories and manufacturing.

Three Models
The IMP-24 printer is available in three model series. Model 3600 series has a 24 character per line (cpl) format. Model 2600 and 2600B (Expanded Buffer) series offer a choice of 24, 32, or 40 cpl.

8K Memory Available

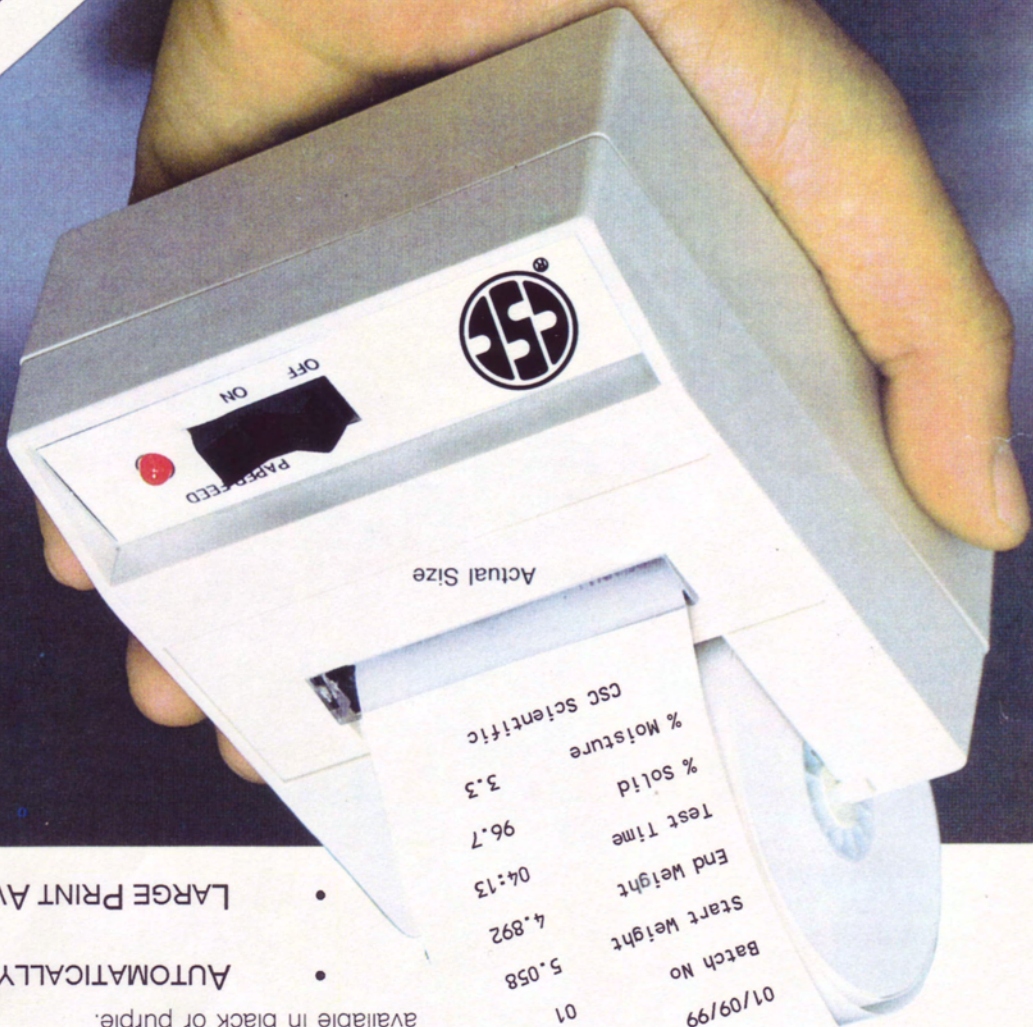

The Model 2600B (Expanded Buffer) series features 8K memory which allows immediate transmission of information to the printer. Computer terminals and other equipment will not be tied up during the printing process.

Uses Plain Paper

IMP-24 printers use inexpensive, easily obtained 2 1/4" adding machine paper that doesn't gum up the printhead as thermal and electrosensitive coated paper can. Printouts are sharp and don't fade. Ribbon cartridges are easily replaceable and are available in black or purple.

AUTOMATICALLY RECORDS TEST DATA
